

## EU Renewable Energy Progress Report – June 2015

The European Commission published the 'Renewable Energy Progress Report' on the EU's 2020 renewable energy targets on 16 June 2015. Whilst this shows that the EU is on track to meet its 20% renewable energy targets, the Report highlights that the UK is a Member State that needs to assess whether its policies are sufficient and effective in meeting renewable energy objectives. Figure 2 (shown below) from the report illustrates the expected renewable energy deployment in Member States against their respective 2020 targets.

Source: European Commission, based on TU Wien (Green-X) projections (2014)

It can be seen that the UK is anticipated to fall short of its legally binding 2020 targets.
